TOILET PAPER DISPENSER FOR SIMULTANEOUS DISPENSING OF MOIST PAPER
AND DRY PAPER

Grantees:	Elvira Knuth 79801 Hohentengen, Germany Freddy Kuno 79801 Hohentengen, Germany
-----------	---

The toilet paper dispenser is configured so that it is open on one side in order to accommodate a toilet paper roll. The liquid tank is situated in the lower region. The foam roller takes up liquid from the tank and releases it to the paper when the paper is pulled downward. The upper roller controls the contact pressure of the paper on the lower roller. If the paper is pulled upward, the paper remains dry.

Achieved advantages:

With the invention a situation is achieved in which dry paper and moist paper can be removed from a dispenser.

Description:

Toilet paper dispenser to dispense moist toilet paper and to dispense dry toilet paper. Toilet paper dispensers or holders of the usual type are only roll holders; they are not capable of moistening paper in order to achieve perfect hygiene.

Problem:

The problem underlying the invention stated in the aforementioned claim is to produce a toilet paper holder from which both dry paper and moist paper can be removed. This means: with the completely new toilet paper dispenser it is possible to remove moist paper from dry paper. This means a perfect hygienic solution. Whether moist or dry paper is removed from the dispenser is determined by the direction of pulling of the paper.

Legend for the drawing:

1. Dry paper
2. Foam roller
3. Roller for contact pressure
4. Liquid container
5. Spring for contact pressure
6. Refill opening

Claim:

Toilet paper dispenser for simultaneous dispensing of dry paper and moist paper. The toilet paper dispenser is configured so that it is open on one side in order to accommodate a toilet paper roll. The liquid tank is located in the lower region. The foam roller takes the liquid from the tank and releases it onto the paper when the paper is pulled downward. The upper roller

controls the contact pressure of the paper on the lower roller. If the paper is pulled upward, the paper remains dry.

Achieved advantages:

With the invention a situation is achieved in which dry paper and moist paper can be removed from the dispenser.
